

Industrial valves trade brochure

First-party pack for site files. Quote from the branch, not from this PDF.

Updated 15 September 2026. Open HTML: <https://www.hdpeplumbingtrade.co.za/downloads/valves-brochure>

Contractors and merchants still search for a valves PDF they can drop into a tender file. The old WooCommerce catalogues 301 here so that intent lands on a first-party pack we maintain, not a supplier reprint and not a 1,258 SKU dump.

Use this page in the browser, or open the PDF. Both describe families we quote, what to send, and which hub to keep using for ranking and specification notes. Prices, stock counts, and SABS edition numbers are not printed here. Ask the branch what is in the current range for the size you need.

How to request a quote

WhatsApp or email the branch with the line below. We confirm availability and price in writing. This file does not replace that quote.

- DN / NPS and whether ends are flanged, threaded, wafer, or PE-socketed (include PE OD)
- PN or class, and flange drilling if it is not your usual default
- Face-to-face or a measured chamber gap, including any dismantling allowance
- Media and temperature (potable water, process water, air, or something else)
- Operator: cap top or handwheel; closing direction if the spec names it
- Actuation if any (manual, lever, gear, pneumatic, electric) plus power notes
- Quantity, collection vs delivery, and the project or merchant account name

Valve families we quote

Families, not a SKU dump. Ask which sizes are in the current range. Do not treat this list as a stock count.

Socketed resilient seated gate valves (RSV)

Ends: PE socket. Dual millimetre call-out such as 100-110mm (DN100 waterworks / 110mm PE OD).

Commonly specified with SABS 664 language on municipal and civils water packs. Treat that as tender language to confirm with the engineer (edition, PN or class, mark). Worked example: 100-110mm socketed RSV product page. Ask the branch which other OD pairs are in the current range.

Flanged resilient seated gate valves

Ends: Flanged. Confirm drilling and face-to-face against the chamber, not from a photo of the handwheel.

Quoted with PN or class as specified. Cap top or handwheel, closing direction, and coating sit on the datasheet. Do not assume a handwheel is included.

Swing check / non-return valves

Ends: Usually flanged on waterworks sizes. Confirm face-to-face and whether a non-slam pattern is required.

Send media and whether the line is potable water, process water, or drainage duty. A 110mm lockable drainage check is a different family to a flanged waterworks swing check.

Y-strainers

Ends: Flanged on the sizes we quote most often. Confirm mesh and blow-down needs on the enquiry.

Pair with the isolation valve on the same line so faces and class match. We do not invent a mesh from a photo.

Lever ball, brass, and PVC isolation

Ends: Threaded, lever, or PVC-pattern ends as specified. Not a PE-socket RSV substitute.

Quoted when the pattern is in the current range. Name the material and duty. Old PVC-valve PDFs 301 to this lander; they are not a live list.

Pressure reducing valves

Ends: Confirm inlet/outlet size, set pressure, and whether the line is potable.

Send upstream and downstream pressure notes. We will not guess a set point from a chamber photo.

Control valves and accessories

Ends: As specified on the control drawing. Not a stocked catalogue dump on this pack.

Send the control spec, power or pilot notes, and companion accessories. We quote from that spec when the line is in range. We do not reprint a supplier control-valve book.

Companion hardware

Ends: Gaskets, bolts, and RSV handwheels quoted with the valve when you ask.

Name DN, flange standard, and whether the operator is cap or handwheel. Coupling and dismantling-joint enquiries go to the high-pressure desk, not this valves PDF.

What this pack is not

- Live ZAR, Pastel list prices, or a public /pricelist dump
- A full catalogue of every valve SKU on the website
- A reprint of Alpine, Tegsa, or other supplier PDFs
- Certificate numbers, SABS edition years, or fire-listing claims we have not evidenced on the datasheet you attach

Questions

Is this a price list?

No. It is a trade pack of valve families we quote, plus how to send a clean enquiry. Public live prices stay off. Ask the branch for a confirmed quote.

Why did the old valves PDF URL open this page?

The ranking WooCommerce PDFs 301 here so you still get a first-party pack. Category URLs such as /product-category/industrial-valves still 301 to the industrial valves hub.

Do you stock every DN in the RSV ladder?

No. This pack does not claim a full size ladder on the shelf. Ask which sizes are in the current range. The 100-110mm socketed RSV page is the worked example we keep indexable.

Can I use SABS 664 from this brochure as the certificate?

No. SABS 664 is named here only as the tender language already used on our RSV hub and the 100-110mm RSV product page. Confirm the edition, pressure class, and mark on the manufacturer datasheet with the engineer of record.

Where do couplings and VJ patterns sit?

Coupling and dismantling-joint enquiries are quoted from the high-pressure desk when the size and coating are in range. They are not a separate catalogue on this valves pack. Send OD, PN or class, and gap length.
